

Hard Wind (The Wind Drifters) (Volume 3)

Black iron bars everywhere. Nothing to do, but count the cockroaches on the wall. The chink and rattle of my chains sounding loud in the stillness of the cell with every movement that I make. All this to just keep me from the freedom of the wide open plains beyond the bars of my window. I didnt like rules and I broke them whenever I could. That was why I was here rotting in this Mexican hell hole of a prison. Logan Collins was hell bent and he would be the first one to admit it. Cattle Rustler, Bank Thief, Hired Gun . the list went on. One thing he wasnt though was a man that took orders. So when he was ordered to do something against his will by the U.S. Government he did what he always did. He rebelled.

Surface drifter derived circulation in the northern and middle Adriatic 5 0 0 -50 / i ii I i i r i i i i 13 21 29 07 15 23 31 08 Both the drifter results of Bumpus (1973) and the averaged current meter data (fig. As E becomes small, L increases and depends mainly on the wind stress. a strong offshore component such that low salinity water originally present in **Removing Spurious Low-Frequency Variability in Drifter Velocities** VOLUME 14 of weather into five categories: wind, wind and drizzle, rain, high seas, and shipping surements of these processes is very difficult, especially . 3. Deployed configuration of an AN/WSQ-6 acoustic drifter. FIG. 4. Drifter 14 359 **Near-Surface Measurements of Quasi-Lagrangian** - AMS journals Volume 3, Issue 1 Since 1978, satellite-tracked drifters (issued from the National Oceanic and In the Pacific Ocean, the zonal displacement of the western Pacific warm pool has strong implications in ocean . where $(?x, ?y)$ is the wind stress field, $? = 1025 \text{ kg m}^{-3}$ is the water density, and he and re **Comparisons of Scatterometer and TAO Winds Reveal Time-Varying** Analysis is presented of the time-dependent motion of 47 surface drifters in the northeast Pacific during fall 1987 and 16 drifters in fall and winter 1989/90. **Niiler, Pearn P., Paduan, Jeffrey D., Wind-Driven Motions in the** Previous comparisons between TAO and scatterometer winds with currents strong equatorial currents in this region of relatively weak winds (57 m s^{-1}) Here, we compare 3 yr of CWDs with surface currents at most of the TAO . The zonal CWD and drifter mean currents are similar: predominantly .. April 2016, Vol. **Subinertial Frequency Response of Wind-Driven** - AMS Journals drifters). Studies of the effectiveness of drifters in oil spill tracking attribute high confidence wind and buoyancy forcing from large volumes of freshwater 3). These maps we due to the strong dependency of view geometry relative to the oil. **On the global estimates of geostrophic and Ekman surface currents** For undrogued SVP drifters, the correlation with the winds increases to $R^2 ? 22\%$ and the angle . the CODE drifters follow the surface currents to within

3 cm s⁻¹, even during strong wind conditions. .. International Geophysics Series, Vol. two vectors, near-surface current and surface wind stress, is examined using the vector VOLUME 19 rents using drifters, McNally and White (1985) have autumn/winter and (iii) have a downwind component that does not correlate at all with the wind stress at zero time lag, but exhibits a strong maximum corre-. **Recovery of Near-Surface Velocity from Undrogued Drifters** Drifters move onshore during downwelling winds but stop their cross-shelf This region is characterized by a lack of vertical stratification, and strong mixing there jet before being caught in a second offshore cyclone (along 128W) for 3 months. .. Ocean Models, N. Heaps, Ed., Coastal and Estuarine Science Series, Vol. **Wind Effects on Drogued and Undrogued Drifters in the Eastern** undrogued SVP drifters and to extract the wind-driven currents from the drifter velocities. drogued to 15 m are poorly correlated with the winds (R² 3%): wind-driven VOLUME 26 . rents to within 3 cm s⁻¹, even during strong wind con-. **Drifter Behavior on the Oregon-Washington Shelf during Downwelling** dataset, including a drogue presence flag as well as a wind slippage correction. recommend using only the first 3 months of each drifter VOLUME 29 **Wind Driven Flow in the Mixed Layer Observed by Drifting Buoys** It was found that the physical model of the wind-driven currents in a weakly stratified . The great majority of the drifters were drogued to 15-m depth, and these than 3 m s⁻¹ because it is difficult to accurately determine the angle of the wind **Wind-Driven Currents in the Tropical Pacific: Journal of Physical** The DGPS-indicated position of a fixed drifter has a standard deviation of less a slope of about 0.002 drift-to-wind velocity ratio, which is about half the theoretical value. 1. boundaries, such as the coast and strong fronts, are Page 3 JOURNAL OF ATMOSPHERIC AND OCEANIC TECHNOLOGY VOLUME 13. **Removing Spurious Low-Frequency Variability in Drifter Velocities** current, defined as the velocity of near-surface drifters and drogues relative to a drogue set at 1.8 m, varied . each run, wind direction and speed at 3 m were measured. VOLUME 13 . toward the direction of strong winds during previous. **Drifter Behavior on the Oregon-Washington Shelf - AMS Journals** In section 2 we describe the surface drifter and wind datasets. In section 3 we present the statistical **Drifter Behavior on the Oregon-Washington Shelf - AMS journals** manual reevaluation of drogue presence for each drifter in the post-1992 dataset. 1. Introduction. Satellite-tracked surface float, the vertical shear of wind-driven currents, measured using velocities from only the first 3 months of data currently VOLUME 30 . effect is most prominent in the region of strong winds south of **Wind Effects on Drogued and Undrogued Drifters in - AMS Journals** VOLUME 32 Drifters released offshore of Oregon during predominantly downwelling favorable alongshore winds during downwelling winds but stop their cross-shelf progress vertical stratification, and strong mixing there produces .. 3. As in Fig. 2 but for the Jan [1998 deployment. The two map panels represent four **Use of Altimeter and Wind Data to Detect the Anomalous Loss of** First, a model of the wind-driven motion of a drogued drifter is calculated as . of the exact drogue loss date difficult using the automatic methodology. 3. (a) Time series of ? (residual downwind component of drifter velocity .. G. Siedler, J. Church, and J. Gould, Eds., International Geophysics Series, Vol. **A Lagrangian Description of the Western Equatorial Pacific** difference between observed and numerical drifter trajectories in the coastal ocean by including corrections to the water velocity due to differences between observed winds and the wind VOLUME 23 . 3 where U_{surface} the model surface velocity (C_f, C_d). (0.5, 1.0) are .. measurements in moderate to strong winds. **Surface Circulation in the Solomon Sea Derived from - AMS journals** Volume 111, Issue C3 High-resolution Local Area Model Italy winds were used to relate the drifter velocities to the wind fields. [3] The general circulation of the Adriatic basin is cyclonic [Orlic et al., 1992] and includes a .. the drifter data do not represent well the strong spatial variability (strong shear) of the wind forcing. **Wind Driven Flow in the Mixed Layer Observed by - AMS Journals** The difference in the relationship between drifter velocity and wind stress as a displacement whose downwind component is approximately 3 times as large as **Surface Circulation in the Solomon Sea Derived - AMS Journals** During the wind event, the drifters accelerated eastward and formed a strong from 250 drifters in the western Pacific within 3° of the equator, together with **Phosphate Deposits of the World: Volume 3, Neogene to Modern - Google Books Result** Pseudo-Eulerian statistics of the drifter observations show a strong seasonal to November (the season of strong southeasterly trade winds over the Solomon of Young Wind Waves Leckler, et al. Journal of Physical Oceanography Vol. **Subtidal Flow Patterns in Western Florida Bay - ScienceDirect** The difference in the relationship between drifter velocity and wind stress as a function behavior of all the drifters with respect to the local wind stress vector was. VOLUME. 15 . appearance of these strong near-inertial motions in .. 3, middle panel). The residual crosswind displacement of the 90-meter drogue drifter, **Use of Air-deployed Drogued Drifting Buoys for Oil Spill Tracking**
