

## Global Cash Management in Europe (MacMillan Business)

The single European Market, the Second Banking Directive, relaxation of cross-border capital and funds movements and the possible introduction of a single European currency have led most corporations to adopt new cash management strategies, or to plan for major structural changes in the near future. This book focuses upon treasury and electronic banking practices in European Cash Management. It is based upon research done by 19 leading European Business Schools and practitioners involved in planning, gathering and analysing data and will include discussion of recent themes and issues.
