Not illustrated. 1905 Excerpt: ...and in very small quantity in a few other tats. It is a mobile liquid, mixing in all proportions with water, alcohol, and ether. It boils without decomposition at 1620 and is readily volatile with steam. Specific gravity at 200, 0.959. Caproic acid, C₆H₁₂O₂, occurs in butter and cocoanut fat. It is a rather oily liquid of unpleasant odor, not miscible with water but somewhat soluble in it and volatile with steam. Boiling point about 2000. Specific gravity at 200, 0.924. Caprylic acid, C₈H₁₆O₂, occurs in cocoanut oil, butter, and human fat. In the cold it crystallizes in leaflets which melt at 16.50. It boils at 2370 and is volatile with steam. One part dissolves in 400 parts of boiling water from which it separates almost completely on cooling. It is readily soluble in alcohol and ether. Specific gravity at 20, 0.910. Capnc acid, C₁₀H₂₀O₂, has been found chiefly in cocoanut oil, butter, and the fat of the spice bush, Linder benzoin. It melts at 31.30, boils at 2700, and distils with steam. Soluble in about 1,000 parts of boiling water; almost insoluble in cold water; soluble in alcohol and ether. Lauric acid, C₁₂H₂₄O₂, occurs abundantly in the fat of the seeds of Linder benzoin, and in smaller proportions in butter, cocoanut fat, palm oil, laurel oil, and the nut oil of the California bay tree. Laurie acid melts at 43.6 and cannot be distilled at atmospheric pressure without decomposition. It is practically insoluble in cold water, slightly soluble in boiling water and appreciably volatile with steam. Specific gravity at 200, 0.883. For a possible exception see Gietel and Want: Journ. prakt. Chem., 1900, Ox, 151. f Oils, fats, and waxes, third edition. J These statements refer to the occurrence of the acids as es:ers rather than in the free state Myristic...
